

The Active Directory (AD) Smart Connector is an innovative tool powered by Easy's, Ivanti One Partner.

The AD Smart Connector, which is so far successfully used by many clients, strongly improves the automation of your employee's identification and authentication within the information system.

The AD Smart Connector provides a full synchronization of all the information relating to the employee in the Active Directory information, and the employee basis of Ivanti Service Manager (Heat Service Management).

The AD Smart Connector allows you to retrieve from the AD all the relevant elements, such as users account, organization groups, servers, workstations, shared folders, printers, etc.

Your access rights can thus be fully managed in your Active Directory and used in your Ivanti Service Manager solution.

Gathering all information from your directories

With the AD Smart Connector, all objects in the Active Directory, such as users, groups, computers, etc..., can be collected and synchronized.

The connector also offers the feature of customizing imports while keeping the links between objects and filter according to several criteria.

KEY FUNCTIONS

- Hierarchical data importation
- Filtering data to be imported
- Permanent updating

KEY BENEFITS

- Hierarchical data structure
- Possibility to select the data to be imported
- Centralization of data
- Access rights fully managed in the AD
