The Easy's Active Directory Update Service (E-ADUS) is an innovative tool powered by Easy's, Ivanti One Partner.

E-ADUS, which is so far successfully implemented with many customers, strongly improves the automation of your employee's identification data.

This connector allows you to perform unilateral updates on the Active Directory from any event of Ivanti Service Manager.

Select the relevant data from Ivanti Service Manager operation, E-ADUS will automatically retrieve them and update your AD.

Synchronize your AD

The E-ADUS allows you to :

- Create a new user
- Update an existing user
- Create a new group
- Add an existing user to a group
- Remove an existing user from a group

KEY FUNCTIONS

- Capacity to update AD without running it
- Data selection

KEY BENEFITS

- Automatic synchronization between ISM and AD
- Employees identification integrity

As soon as a targeted event occurs, the workflow is triggered, and the selected authentication data are automatically updated in the Active Directory.
